EXP_2026Q2_CART_NUDGES · VERDICT REPORT · ENGINEER

GROWTH · CART · 2026-06-05 · 2,500 UNITS · 14 DAYS

Inconclusive.

Sample size short of pre-registration AND primary CI straddles zero. Extend or end.

TL;DR

INCONCLUSIVE. **Extend the experiment or end it without shipping. The data can't yet support a call.**

Only 2,500 units against 5,000 required, and the primary 95% CI straddles zero. We can't tell signal from noise yet.

CONFIDENCE

leaning negative

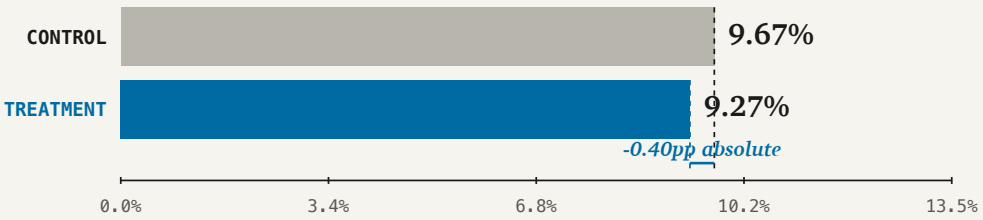

DECISION STEP

step 3

PRIMARY METRIC · AVERAGE_ORDER_VALUE

Treatment 9.27% vs Control 9.67%

Treatment and control rates on the same axis. The dark blue segment on the treatment bar is the absolute lift; the dotted line shows the lift relative to the control end.

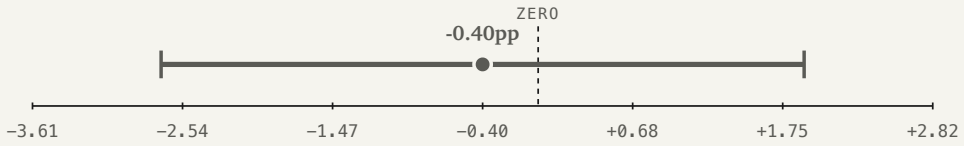

Per-arm conversion. The lift is -0.40pp absolute (-4.1% relative).

CONFIDENCE INTERVAL ON LIFT

95% CI on lift: (-2.69, +1.90)pp — straddles zero.

Zero is inside the interval. We can't reject the null at a = 0.05. The verdict tree then asks whether we had enough sample to detect what we cared about.

The CI bar shows the range of plausible true lifts. The crossbars are the 95% bounds; the dot is the point estimate.

GUARDRAILS

Guardrail clear.

The pre-registered guardrails are revenue and (where wired) latency. None crossed their harm thresholds.

revenue_per_user

`threshold ≥ −5.0% · higher_is_better`

`90% CI [−6.54, +3.46]% · realized −1.54% ·`

AMBIGUOUS

DECISION TREE · HOW THE VERDICT WAS REACHED

Walked 8 steps; step 3 fired the verdict.

Each row is a checkpoint in the verdict tree. Walking stops at the row marked FIRED; that step's logic is what produced the verdict above.

0	Required inputs present (UNVERIFIABLE guard)	`all non-null`

1	SRM passes (or override resolved)	`srm_pass = True`
2	Guardrails clear (no 90% CI on harm side)	`guard_lift = −1.54%`
3	Powered (n_observed ≥ n_required) · **FIRED**	`n = 2,500 / 5,000`
4	Primary CI excludes 0	`CI [−2.69, +1.90] pp`
5	Primary CI not on harm side	`direction = higher_is_better`
6	Lift magnitude ≥ MDE/2	`|lift| = 0.397pp vs MDE/2 = 0.100pp`
7	Novelty stable (late_ratio ≥ 0.7)	`late_ratio = —`

PROVENANCE · AUDITABLE CHAIN

Reproducible from sealed brief + warehouse fixture.

Every quantitative claim above resolves to a row in the warehouse, a function in `agentxp.stats.*`, or a step in `agentxp.interpret.tree`. The chain hash below covers the brief, every stat result, and the verdict tree's terminal step.
