EXP_2026Q2_PRICING_ANCHOR · SRM CHECK · OPERATOR

GROWTH · PRICING · 2026-06-05 · X^2 P = 0.4080

Sample ratio passes.

The observed split is close enough to the expected split that the rest of the analysis can proceed. This gate fires before any metric value is read.

WHAT THIS GATE DOES

Proceed to metrics. No assignment investigation required.

A sample-ratio mismatch invalidates everything downstream — observed lift could just be a different population in each arm. The gate fires before any metric is read (R2).

OBSERVED SPLIT

3963 / 4037

expected 4000 / 4000

X^2 STATISTIC	P-VALUE
0.68	0.4080
THRESHOLD	VERDICT
0.0005	PASS

READING THIS CHECK

A small p-value here invalidates the rest of the analysis.

χ^2 compares the observed split against the expected split. A p-value above the threshold means the split is consistent with random allocation. The analyzer is unblocked and reads the primary metric next.
