EXP_2026Q2_CART_NUDGES · VERDICT REPORT · OPERATOR

GROWTH · CART · 2026-06-05 · 2,500 UNITS · 14 DAYS

Inconclusive.

Sample size short of pre-registration AND primary CI straddles zero. Extend or end.

TL;DR

INCONCLUSIVE. **Extend the experiment or end it without shipping. The data can't yet support a call.**

Only 2,500 units against 5,000 required, and the primary 95% CI straddles zero. We can't tell signal from noise yet.

DECISION STEP
step 3

PRIMARY METRIC · AVERAGE_ORDER_VALUE

Treatment 9.27% vs Control 9.67%

Treatment and control rates on the same axis. The dark blue segment on the treatment bar is the absolute lift; the dotted line shows the lift relative to the control end.

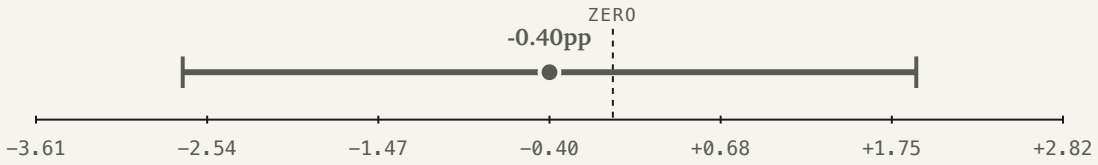

Per-arm conversion. The lift is -0.40pp absolute (-4.1% relative).

CONFIDENCE INTERVAL ON LIFT

95% CI on lift: (-2.69, +1.90)pp — straddles zero.

Zero is inside the interval. We can't reject the null at $a = 0.05$. The verdict tree then asks whether we had enough sample to detect what we cared about.

The CI bar shows the range of plausible true lifts. The crossbars are the 95% bounds; the dot is the point estimate.

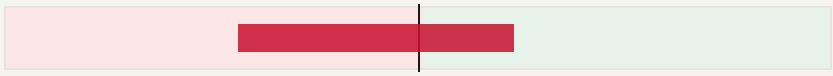

GUARDRAILS

Guardrail clear.

The pre-registered guardrails are revenue and (where wired) latency. None crossed their harm thresholds.
