EXP_2026Q2_CART_NUDGES · SRM CHECK · OPERATOR

GROWTH · CART · 2026-06-05 · X² P = 0.0340

Sample ratio is borderline.

The observed split drifted enough to warrant a look at the assignment service. Metrics can still be read, but the verdict carries an investigation note.

WHAT THIS GATE DOES

Investigate assignment before relying on the verdict.

A sample-ratio mismatch invalidates everything downstream — observed lift could just be a different population in each arm. The gate fires before any metric is read (R2).

OBSERVED SPLIT

1303 / 1197

expected 1250 / 1250

X² STATISTIC	P-VALUE
4.49	0.0340
THRESHOLD	**VERDICT**
0.0005	WARNING

READING THIS CHECK

A small p-value here invalidates the rest of the analysis.

A p-value below the threshold but not catastrophically so suggests a small imbalance that may be sampling noise — or may reflect a real (small) assignment-service issue. Note it in the log; proceed cautiously.
