EXP_2026Q2_INVALID_SPLIT · VERDICT REPORT · OPERATOR

GROWTH · PRICING · 2026-06-05 · 10,000 UNITS · 14 DAYS

Invalid assignment.

The assignment ratio drifted past the χ^2 threshold. No metric value was read.

TL;DR

INVALID ASSIGNMENT. **Pause and audit the assignment service before reading any metrics.**

The observed assignment split fell outside the χ^2 threshold. The lift number you'd compute would be confounded with the assignment imbalance, so the tree refuses to report it.

ASSIGNMENT IMBALANCE

4,229 / 5,771

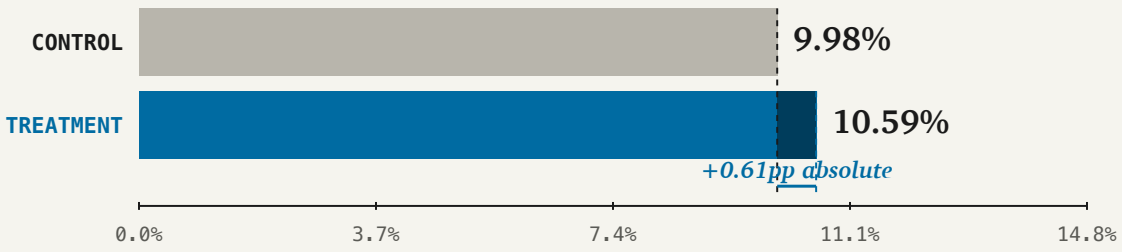

control / treatment — expected near 50 / 50

X^2 STATISTIC	P-VALUE (SRM)
237.78	0.0000
THRESHOLD	**DECISION STEP**
0.0005	step 1

PRIMARY METRIC · CONVERSION_RATE

Treatment 10.59% vs Control 9.98%

Treatment and control rates on the same axis. The dark blue segment on the treatment bar is the absolute lift; the dotted line shows the lift relative to the control end.

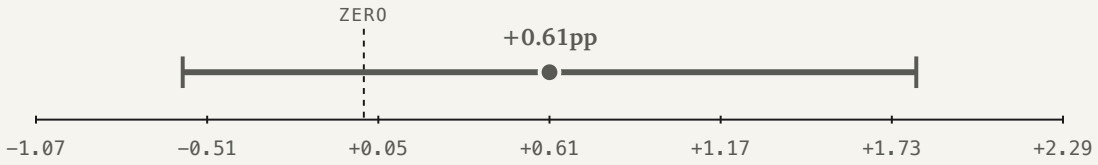

Per-arm conversion. The lift is +0.61pp absolute (+6.1% relative).

CONFIDENCE INTERVAL ON LIFT

95% CI on lift: (-0.59, +1.81)pp — straddles zero.

Zero is inside the interval. We can't reject the null at $a = 0.05$. The verdict tree then asks whether we had enough sample to detect what we cared about.

The CI bar shows the range of plausible true lifts. The crossbars are the 95% bounds; the dot is the point estimate.

GUARDRAILS

Guardrail clear.

The pre-registered guardrails are revenue and (where wired) latency. None crossed their harm thresholds.
