EXP_2026Q2_PRICING_ANCHOR · VERDICT REPORT · ENGINEER

GROWTH · PRICING · 2026-06-05 · 8,000 UNITS · 14 DAYS

No lift.

Well-powered null result. The CI is tight enough to call it: this change did not move conversion.

TL;DR

NO LIFT. **Don't ship. The change had no meaningful effect on the primary metric.**

With 8,000 units observed against 6,400 required, the 5.0% MDE was detectable. The primary 95% CI (-0.21, +2.48)pp straddles zero — there is no real effect to ship.

LIFT ON CONVERSION_RATE

+1.13pp

treatment vs control · +11.3% relative

95% CI ON LIFT
[-0.21, +2.48]pp

P-VALUE
0.0998

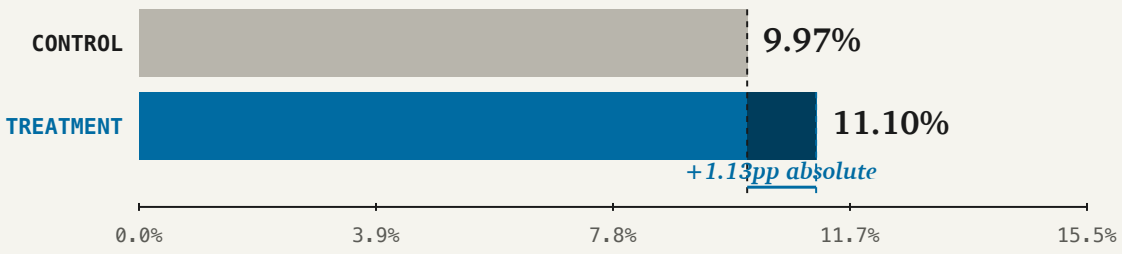

CONFIDENCE
very likely positive

DECISION STEP
step 4

PRIMARY METRIC · CONVERSION_RATE

Treatment 11.10% vs Control 9.97%

Treatment and control rates on the same axis. The dark blue segment on the treatment bar is the absolute lift; the dotted line shows the lift relative to the control end.

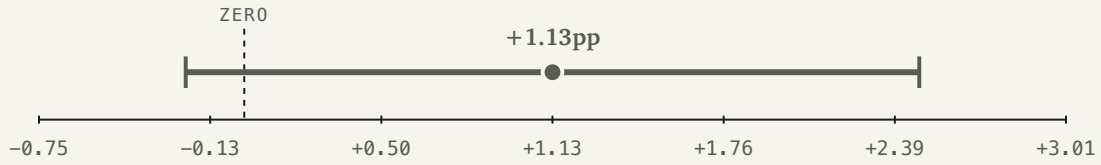

Per-arm conversion. The lift is +1.13pp absolute (+11.3% relative).

CONFIDENCE INTERVAL ON LIFT

95% CI on lift: (-0.21, +2.48)pp — straddles zero.

Zero is inside the interval. We can't reject the null at a = 0.05. The verdict tree then asks whether we had enough sample to detect what we cared about.

The CI bar shows the range of plausible true lifts. The crossbars are the 95% bounds; the dot is the point estimate.

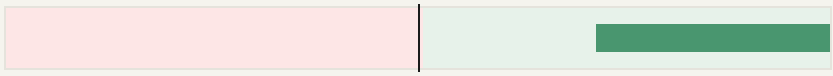

GUARDRAILS

Guardrail clear.

The pre-registered guardrails are revenue and (where wired) latency. None crossed their harm thresholds.

revenue_per_user

`threshold ≥ −5.0% · higher_is_better`

`90% CI [+6.48, +16.48]% · realized +11.48% ·` **CLEAR**

DECISION TREE · HOW THE VERDICT WAS REACHED

Walked 8 steps; step 4 fired the verdict.

Each row is a checkpoint in the verdict tree. Walking stops at the row marked FIRED; that step's logic is what produced the verdict above.

0	Required inputs present (UNVERIFIABLE guard)	`all non-null`
1	SRM passes (or override resolved)	`srm_pass = True`
2	Guardrails clear (no 90% CI on harm side)	`guard_lift = +11.48%`
3	Powered (n_observed ≥ n_required)	`n = 8,000 / 6,400`
4	Primary CI excludes 0 · **FIRED**	`CI [−0.21, +2.48] pp`
5	Primary CI not on harm side	`direction = higher_is_better`
6	Lift magnitude ≥ MDE/2	`|lift| = 1.130pp vs MDE/2 = 0.250pp`
7	Novelty stable (late_ratio ≥ 0.7)	`late_ratio = —`

PROVENANCE · AUDITABLE CHAIN

Reproducible from sealed brief + warehouse fixture.

Every quantitative claim above resolves to a row in the warehouse, a function in `agentxp.stats.*`, or a step in `agentxp.interpret.tree`. The chain hash below covers the brief, every stat result, and the verdict tree's terminal step.
