EXP_2026Q2_PRICING_ANCHOR · VERDICT REPORT · OPERATOR

GROWTH · PRICING · 2026-06-05 · 8,000 UNITS · 14 DAYS

No lift.

Well-powered null result. The CI is tight enough to call it: this change did not move conversion.

TL;DR

NO LIFT. **Don't ship. The change had no meaningful effect on the primary metric.**

With 8,000 units observed against 6,400 required, the 5.0% MDE was detectable. The primary 95% CI (-0.21, +2.48)pp straddles zero — there is no real effect to ship.

DECISION STEP
step 4

PRIMARY METRIC · CONVERSION_RATE

Treatment 11.10% vs Control 9.97%

Treatment and control rates on the same axis. The dark blue segment on the treatment bar is the absolute lift; the dotted line shows the lift relative to the control end.

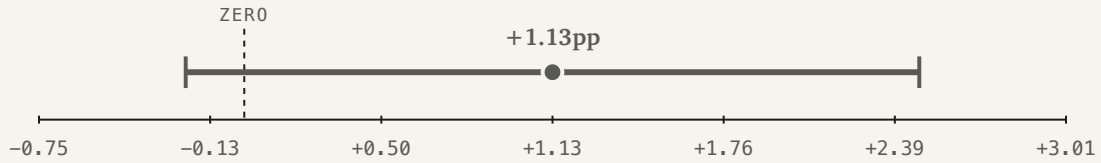

Per-arm conversion. The lift is +1.13pp absolute (+11.3% relative).

CONFIDENCE INTERVAL ON LIFT

95% CI on lift: (-0.21, +2.48)pp — straddles zero.

Zero is inside the interval. We can't reject the null at $\alpha = 0.05$. The verdict tree then asks whether we had enough sample to detect what we cared about.

The CI bar shows the range of plausible true lifts. The crossbars are the 95% bounds; the dot is the point estimate.

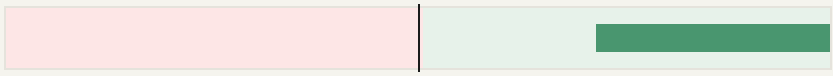

GUARDRAILS

Guardrail clear.

The pre-registered guardrails are revenue and (where wired) latency. None crossed their harm thresholds.
