EXP_2026Q2_PRICING_ANCHOR · SRM CHECK · OPERATOR

GROWTH · PRICING · 2026-06-05 · X² P = 0.4080

# Sample ratio passes.

*The observed split is close enough to the expected split that the rest of the analysis can proceed. This gate fires before any metric value is read.*

WHAT THIS GATE DOES

## Proceed to metrics. No assignment investigation required.

*A sample-ratio mismatch invalidates everything downstream — observed lift could just be a different population in each arm. The gate fires before any metric is read (R2).*

---

OBSERVED SPLIT

# 3963 / 4037

*expected 4000 / 4000*

| X² STATISTIC | P-VALUE |
|---|---|
| 0.68 | 0.4080 |
| **THRESHOLD** | **VERDICT** |
| 0.0005 | PASS |

READING THIS CHECK

## A small p-value here invalidates the rest of the analysis.

*$\chi^2$ compares the observed split against the expected split. A p-value above the threshold means the split is consistent with random allocation. The analyzer is unblocked and reads the primary metric next.*

---
