SEARCH · RELEVANCE · 2026-06-05 · 12,000 UNITS · 14 DAYS

Do not ship.

Primary lift may be real, but at least one guardrail's lower 90% CI crosses the harm threshold.

TL;DR

DO NOT SHIP. **Hold the change. The primary moved but the guardrail breached.**

search_to_purchase_rate lifted by +0.99pp, but the revenue-per-user guardrail's 90% CI fell past its harm threshold. The compositional story (more orders, lower value) shipped is a net negative.

GUARDRAIL · REVENUE_PER_USER

PRIMARY LIFT
+0.99pp

DECISION STEP
step 2

PRIMARY METRIC · SEARCH_TO_PURCHASE_RATE

Treatment 11.74% vs Control 10.75%

Treatment and control rates on the same axis. The dark blue segment on the treatment bar is the absolute lift; the dotted line shows the lift relative to the control end.

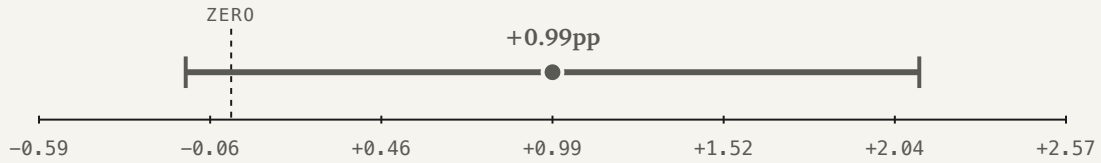

Per-arm conversion. The lift is +0.99pp absolute (+9.2% relative).

CONFIDENCE INTERVAL ON LIFT

95% CI on lift: (-0.14, +2.12)pp — straddles zero.

Zero is inside the interval. We can't reject the null at a = 0.05. The verdict tree then asks whether we had enough sample to detect what we cared about.

The CI bar shows the range of plausible true lifts. The crossbars are the 95% bounds; the dot is the point estimate.

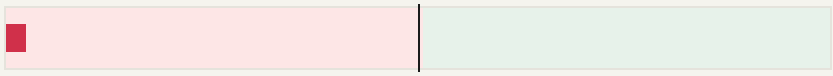

GUARDRAILS

1 guardrail breached.

At least one guardrail's lower 90% CI fell past its harm threshold. The verdict tree fired NO-SHIP-GUARDRAIL at step 2 — primary metric movement does not outweigh a guardrail breach.
